Our 3Ai learning design principles

Leave the future better than we found it. As custodians of the present, we are driven by a shared sense of responsibility to future generations.

Foster respectful relationships. Building future systems requires many types of knowledge and expertise to collaborate closely, and respectful relationships are at the heart of this.

Care for the environment. Sustainability threads through our design decisions about platforms, material resources, travel and course content.

Design responsibly. We have a responsibility to each other and future generations. This means thinking about ethics, safety and risk.

Facilitate access. This includes thinking about equity of access in terms of finances, prior education, interfaces, geography and language.

Deliver excellence. Ensure we are informed by top-quality research, analysis, expertise, design and delivery, and continue to improve in line with what we learn.

Engage a broad community. This means bringing a whole range of people into the conversation, and listening closely in many different ways.

Create an experience. Learning isn’t just about content, especially when we’re working within complex and adaptive systems. We try to choose the best form, format and approach to achieve the outcomes we seek.

Diversify and decolonise the curriculum. This means being mindful of gender, format, culture, geography and values represented by our staff, resources and
